

Viessmann Academy: Vi 112 - Solar Thermal Technology Advanced Vitosol

Updated

Prerequisite: Vi111 Solar Thermal Technology

Duration: 1 - Day.

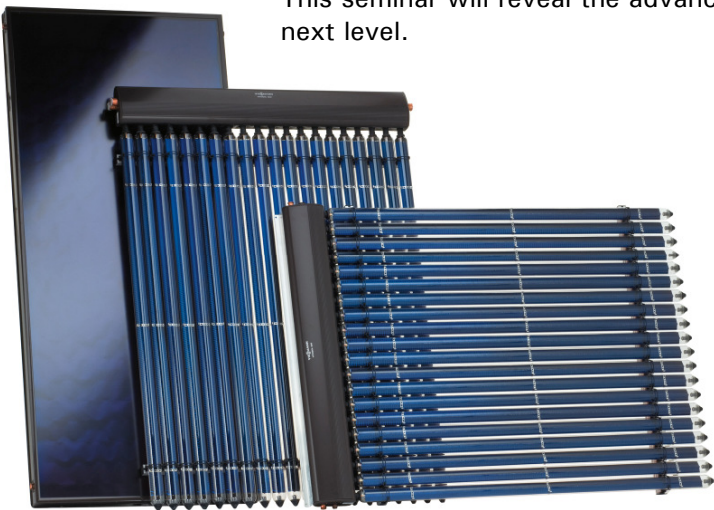

Course Outline: This advanced 1-day seminar builds on the information from the Vi111 seminar and provides a more advanced look into system sizing, control, and simulation software.

Course Description: Where Vi111 leaves off Vi112 takes over. If you're the go to guy for your company's Solar system designs and want to know more about the programming and set up of complex solar control applications, or if you want to better understand how to use the sizing and simulation software, then you need to attend this seminar.

Some of the topics covered will be:

- Larger scale systems for commercial DHW applications and heating for indoor pools.
- Multi- load systems that combine DHW heating with space heating supplement and / or pool heating.
- We will provide an understanding of the Solar Thermal control options and programming so you can squeeze the most out of this technology.
- We will empower you to use the ESOP solar simulation software.

This seminar will reveal the advanced concepts needed to take your Solar Thermal designs to the next level.

Seminars fill up quickly. Register today!
